

■ Medical Appointment System (FastAPI)

Project Overview

This project is a backend application built using FastAPI that simulates a real-world Medical Appointment System. It allows users to manage doctors and book appointments with complete workflow handling.

Features

- RESTful APIs using FastAPI
- Data validation using Pydantic
- CRUD operations for Doctors
- Appointment booking system

Workflow

- Book Appointment
- Check-in
- Complete Appointment
- Cancel Appointment

Advanced Features

- Search appointments
- Sorting
- Pagination
- Combined browsing

Run Project

```
uvicorn main:app --reload --port 8001
```
